This force causes oscillation of the system, or periodic motion. Figure at the right illustrates the restoring force F_x . Characteristics of periodic motion The amplitude, A , is the maximum magnitude of displacement from equilibrium. The period, T , is the time for one cycle. about a fixed point, at a definite interval of time, it is said to have a periodic motion If a body moves to and fro, back and forth, or up and down about a fixed point in a definite interval of time, such motion is called an oscillatory motion. For example, in a transverse wave traveling along a string, each point in the string oscillates back and forth in the transverse direction. 12. 1. 2 CHAPTER 1.
